Here you go. It might be worth hopping on the phone to discuss if you have a minute. Thanks,

Josh

Great, thanks Josh. For the AUMs, they are billed AUMs. I don't actually know if there are sheep or goats but based on our talk with Julie last week, I'm guessing it's similar to GSE and therefore predominantly cattle.

For sand and gravel - whatever is easiest.

So I actually need to turn in a draft of this paper by noon eastern time - is it at all possible to have some estimates by then? No worries if not.

Thanks so much!

Ann

Hi Ann,

Sure, I can help out.

Do you know if the AUMs you received are the active AUMs on their permits or the number of AUMs they billed? I typically use billed AUMs since it is the best proxy for actual use. I'm assuming these AUMs are solely for cattle and do not include other livestock (most importantly, sheep or goats). I'll probably use the same approach as we use for the annual analysis. That means I'll be using state-level multipliers. As I mentioned to Ben last week, I'm a bit uneasy about that approach since ranching operations and practices are fairly nuanced at the local levels. That said, it is a reasonable first estimate.

With respect to sand and gravel, are you ok with me running estimates through the state model or would you like me to run a multi-county model (covering the field office)?

Do you need these results today?

Josh

Hi Josh,

I was wondering if you could run a quick IMPLAN analysis for us to have some economic contribution estimates of some of the non-recreation activities at what is now Bears Ears National Monument? It would just be for grazing and sand/gravel production. We have the following production levels for 2016 from the Monticello field office:

Grazing: 36,402 AUMs

Sand & gravel (this is actually for 2015): 2,914 cu yd

For the sand & gravel, could you also run an analysis on a production level of 21,396 cu yds? That's the five year average. I think 2015 was the final year of the 10-year time span that the 200,000 cu yd maximum covers so that level of production may have been an outlier.

Let me know if you need more information or clarification.

Thanks!

Ann
